

Get it all sorted!

In seconds with the all-new BL 3500 bulk sorter

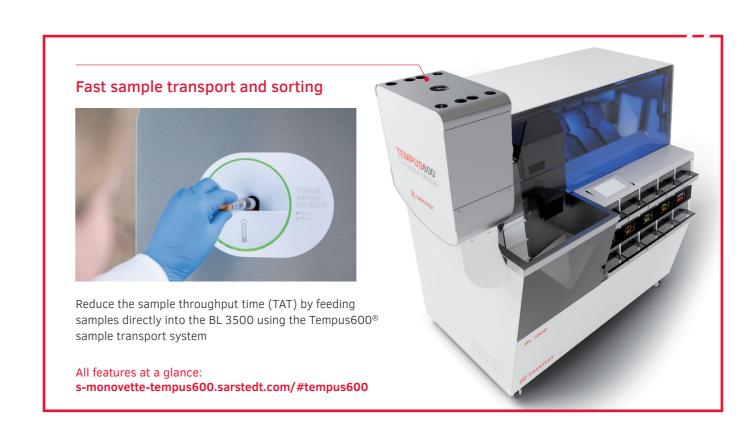

Increase the efficiency of your laboratory

Time is a key factor in the daily laboratory routine. With the new BL 3500, laboratory teams have a reliable team member at their side providing efficient and error-free support for sample sorting – faster than ever before.

Compact construction and ergonomic design Thanks to its compact dimensions of 1385 × 905 × 1455 mm, the BL 3500 also fits seamlessly into small laboratory environments. The BL 3500 combines technical complexity with an optimised and space-saving design. Sample throughput of 3,500 tubes/h Speed and reliability are essential factors in sample sorting. And the BL 3500 sets new standards here as well. With a sample throughput of up to 3,500 tubes per hour, the BL 3500 is one of the fastest on the market – and therefore part of the basic equipment of every modern laboratory, both large and small.

Is a sample from the bulk material not clearly identifiable or is the test order not yet active in the LIS? No problem with the BL 3500's smart loop function. This is because the return of the sample helps to clearly allocate the sample during a repeat run. If this is also not possible, the sample is ejected into a separate

container – in an easy and uncomplicated manner.

Overview of all advantages of the new BL 3500

Efficient and saves time

- Accelerated provision of analysis results for optimal patient care
- Urgent samples can be processed as a matter of priority, which ensures a quick diagnosis and rapid initiation of treatment and care for patients
- The compact design creates valuable laboratory space and fits perfectly into existing laboratory concepts

User friendliness

- The intuitive user interface enables simple and efficient operation, reduces training requirements and minimises the risk of operating errors
- Optimised work environment: The ergonomic design reduces the strain on staff and promotes a more comfortable and therefore more productive work environment
- The clear visualisation of the distribution targets contributes significantly to minimising operating errors

Precision

- Risk minimisation: Automated processing and barcode scanning reduce the risk of sample mix-ups and other errors
- Increased safety and reliability during analysis:
 Incorrectly labelled samples are reliably detected and do not enter the analyser

Flexibility

- Adaptability: Due to the compatibility with various sample types and sizes, laboratories can flexibly use sample tubes from different manufacturers
- Customisability: Various sorting criteria can be adapted and configured flexibly to different daily routines

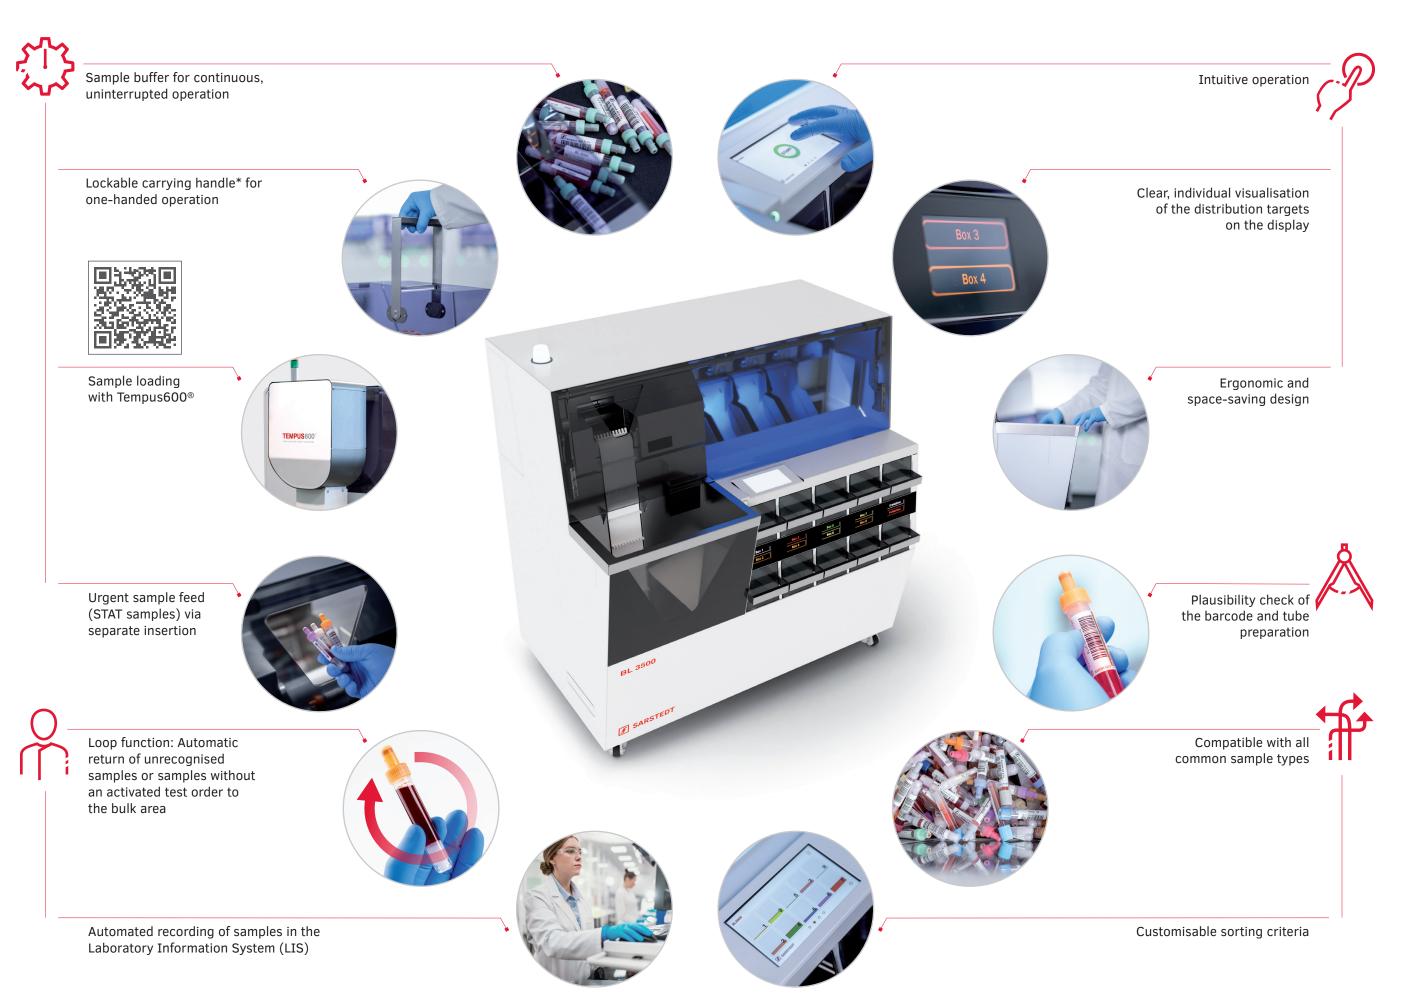

Relief for employees

- Enables staff to be utilised more efficiently for priority tasks
- The reduction of manual sample checks reduces the workload
